

The Miracle of Evolution

by Scott Brooke

October 10, 2009

May 24, 2012

This is a list of scientific impossibilities that would have had to happen if evolution is true:

- **The Big Bang.** According to this theory, nothing exploded, which violates the First Law of Thermodynamics: Matter/energy cannot be created or destroyed.
- **Formation of Stars.** This violates Boyle's Gas Laws. Gas does not condense by itself.
- **Spontaneous Generation / Abiogenesis.** This was disproven over 150 years ago.
- The earth and other objects in the solar system are still hot after billions of years.
- **Polystrate Fossils.** Trees stayed standing for millions of years, sometimes upside-down, while multiple rock layers formed around them.
